Data description as follows

Variable	Description				
Id	Unique ID for each home sold				
Date	Date of the home sale				
Price	Price of each home sold				
Bedrooms	Number of bedrooms				
Bathrooms	Number of bathrooms, where .5 accounts for a room with a toilet but no shower				
Sqft_living	Square footage of the apartments interior living space				
Sqft_lot	Square footage of the land space				
Floors	Number of floors				
Waterfront	A dummy variable for whether the apartment was overlooking the waterfront or not				
View	An index from 0 to 4 of how good the view of the property was				

Condition	An index from 1 to 5 on the condition of the apartment,
Grade	An index from 1 to 13, where 1-3 falls short of building construction and design, 7 has an average level of construction and design, and 11-13 have a high quality level of construction and design
Sqft_above	The square footage of the interior housing space that is above ground level
Sqft_basement	The square footage of the interior housing space that is below ground level
Yr_built	The year the house was initially built
Yr_renovated	The year of the house's last renovation
Zipcode	What zipcode area the house is in
Lat	Lattitude
Long	Longitude
Sqft_living15	The square footage of interior housing living space for the nearest 15 neighbors
Sqft lot15	The square footage of the land lots of the nearest 15 neighbors

In [25]: df.info() # a good initial picture of the data

initial thoughts for necessary data and a regression upon seeing the data -

price is y target

- # 1) Unique identifiers (column= id) are unnecessary for a regression
- # 2) lat and long wont be needed if include zipcode and will just be no ise (decided to keep lat/long over zip)
- # 3) square footage and home quality is likely to change based on locat ion
- # 4) anticipate autocorrelation between location and home features dr opping zipcode and keeping lat long
- # 5) date as time goes on, home prices are likely to go up if the s ales are all within a close time frame then we can ignore date
- # 6) nearest 15 neighbors data will autocorrelate with homes nearby, remove data
- # 7) already have square footage of home, remove above and below ground sqft
